SCALEXTRIC GUIDE ADAPTER BUILD INFORMATION

Thank you for purchasing this product from wsr3d: RRP £2.97 pack of 3

Manufactured: High Quality 3D Printed

INFORMATION:

The adapter has been CAD designed to replace the Scalextric Easy Pickup Guide System, changing to a 3rd party guide such as ScaleAuto or Slot.it.

SPEC:

- Adapters depth plate 1mm
- Shaft length 4.75mm
- Shaft diameter 3mm
- Outer diameter 5mm

FITTING INSTRUCTIONS

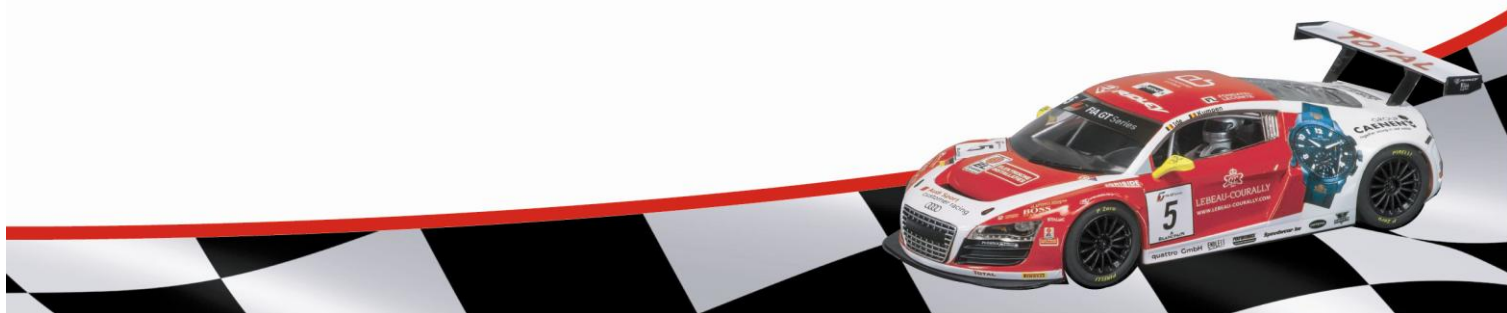

We have designed the hole to 3mm. You may need to file the adapter hole to suit your guide shaft depending on your guide stick diameter. The hole in the centre is generic to suit a range of guides... Very little filling is required with the Scaleauto CS-1608 with a 3.4mm stick diameter.

- Remove Scalextric Easy Pickup Guide assembly.
- Position the guide adapter on the Scalextric chassis sleeve. A little filling is required on the outer diameter for a comfortable fit. (See Photos)
- Once filed push adapter into place on the underside of the chassis. Fix into place with suitable glue.
- When glue is dried fill the inner shaft with a small round fill to suit your guide shaft width.

CUSTOM PARTS:

If you have a scalextric chassis with a deeper recess let us know the depth and we will make one to your requirements.
